FAQ

When the temperature and humidity displayed on the screen is more accurate?

About 30 minutes after configuration completed, the temp and humidity displayed on the screen is closer to actual ambient environment, so the readings are more accurate.

2. How the backlight is triggered ?

When the object pass through the infrared inductive switch from area less than 5CM away, the backlight will be triggered.

3. Please keep the sensor away from any heat source.

4. Voice commands for Alexa and Google:

OK Google, what is the <device> humidity ? OK Google, what is the <device> temperature ? Alexa, what is the <device> humidity ? Alexa, what is the temperature of <device name> ?
